OBJECTIVE

Computer Science student focused on building full-stack web applications, iOS and Android apps, terminal user interfaces, dashboards, and data-driven systems. Strong emphasis on ease of use, clean frontend design, and structured user data workflows. Interested in API integrations, live data sources, and MCP server architectures, with a collaborative approach to building scalable products.

EDUCATION

B.Tech – Computer Science and Engineering

Vellore Institute of Technology, Chennai

2024 – Present

CGPA: 8.73/10

SKILLS

Languages	Swift, TypeScript, JavaScript, Dart, Python, Java, C++, C
Frontend	React, SwiftUI, Flutter, HTML, CSS
Backend	Node.js, Express, REST APIs, PostgreSQL, Supabase
Systems	JSONB modeling, API integrations, Real-time systems, MCP servers
Tools	Git, Xcode, Postman, Figma, CLI/TUI Development

EXPERIENCE

Billing System Developer Intern

Mar 2025 – Jul 2025

GeoPacific Solutions, Chennai

- Built a billing and inventory platform using Node.js, TypeScript, and PostgreSQL supporting multi-product invoices and franchise workflows.
- Designed JSONB-based schema enabling flexible product storage and dynamic invoice generation without schema changes.
- Implemented role-based authentication and secure API handling using JWT.
- Optimized backend workflows for real-time billing and transaction tracking.

PROJECTS

Kern — Personal Data OS

[GitHub](#)

Live: kern-alpha.vercel.app

- Built a keyboard-driven personal data OS where users define collections, fields, and relationships dynamically.
- Implemented schema-free data modeling using PostgreSQL JSONB with relational linking between collections.
- Designed “views as code” system allowing custom React components with Monaco editor and sandboxed execution.
- Integrated live data sources (GitHub, Notion, Google Calendar, Linear, RSS) as first-class collections.
- Developed MCP server (Supabase Edge Functions) enabling AI to read/write user data via natural language.

Landroid — AI Land Monitoring System

[GitHub](#)

- Built Flutter + FastAPI application for AI-powered land health monitoring using drone imagery.
- Processed GeoTIFF orthomosaic images to generate NDVI-based plant health maps and insights.
- Implemented parcel management system with consultant and landowner roles.
- Integrated Supabase (PostgreSQL + PostGIS) for spatial data, documents, and user management.

Student Dashboard

[GitHub](#)

- Built full-stack academic system integrating VTOP and LMS data into a unified dashboard.
- Developed attendance and CGPA/GPA tracking with semester-wise breakdown and simulations.
- Built planning tools including assignments, notes (markdown editor, tasks, and file management modules).
- Designed calendar and timetable systems for academic event visualization.

Arbor — Hierarchical Problem Solver

[GitHub](#)

- Built tree-based problem-solving system with interactive visualization using React Flow.
- Implemented sub-problem decomposition and backtracking with context-aware reasoning.
- Integrated OpenAI API with BYOK (Bring Your Own Key) model stored locally.
- Enabled export/import of problem trees as JSON for persistence.

Centralized Billing & Inventory System

[GitHub](#)

- Built role-based billing system with admin, franchise, and cashier workflows.
- Implemented franchise-level inventory tracking and product management.
- Designed JSONB-based invoice system supporting dynamic multi-product transactions.
- Developed backend APIs using Node.js and PostgreSQL for sales tracking.

Notion Widgets (iOS)

[GitHub](#)

- Built SwiftUI app integrating Notion API to fetch and render structured data.
- Developed WidgetKit-based widgets for tasks, schedules, and academic events.
- Implemented smart filtering for status, priority, and date-based views.
- Optimized UI for fast, glanceable information display.

iOS Planner

[GitHub](#)

- Built SwiftUI planner app for task scheduling, deadlines, and prioritization.
- Designed minimal UI focused on usability and reduced friction in daily workflows.
- Structured system for extensibility into reminders and analytics.

Terminaltype

[GitHub](#)

- Built terminal-based typing test with real-time WPM and accuracy tracking.
- Designed fast, distraction-free TUI without browser dependency.
- Implemented performance tracking in a CLI-native environment.

Portfolio Website

[GitHub](#)

Live: sharann.dev

- Designed and developed personal portfolio with clean, developer-focused UI.
- Showcases projects, systems, and technical work with structured layout.

EXTRA-CURRICULAR ACTIVITIES

- Member, Web/App Development Department — iSpace Club, VIT Chennai; contributed to internal tools, technical projects, and development workshops.
- Designed productivity systems and Notion dashboards adopted by peers for academic planning and workflow management.
- Designed and distributed iOS icon packs using Figma; published and showcased designs at [sharannsicons](#).
