

SHARANN MANOJKUMAR

+91 91503 20780 Chennai, India

sharannmanojkumar@gmail.com [linkedin.com/in/sharannm](https://www.linkedin.com/in/sharannm) sharann.dev github.com/sharann-del

OBJECTIVE

Computer Science student building full-stack web apps, iOS apps, TUIs, and AI-powered systems. Strong emphasis on clean design, structured data workflows, and LLM integration. Experienced in API design, MCP server architectures, and shipping production-ready products collaboratively.

EDUCATION

B.Tech – Computer Science and Engineering

2024 – Present

Vellore Institute of Technology, Chennai CGPA: 8.75/10

SKILLS

Languages	Swift, TypeScript, JavaScript, Python, Go, Dart, Java, C++, C
Frontend	React, Next.js, SwiftUI, Flutter, HTML, CSS
Backend	Node.js, FastAPI, Express, REST APIs, PostgreSQL, Supabase, SQLite
AI/ML	LLM integration, OpenRouter, NLP, NER, RoBERTa, hallucination detection
Systems	JSONB modeling, MCP servers, real-time systems, CLI/TUI development
Tools	Git, Xcode, Tauri v2, Postman, Figma, Docker

EXPERIENCE

Full Stack Engineer Intern

Jun 2026 – Present

Ambian Strategy Private Limited, Remote

- Building ProposalOS, an AI-powered RFP discovery and proposal automation platform covering the full procurement lifecycle from opportunity discovery to submission-ready proposals.
- Developing features using React, Next.js, TypeScript, Node.js, and PostgreSQL; contributing to backend architecture, API design, search and data processing pipelines.
- Integrating LLMs to automate requirement analysis, opportunity qualification, proposal generation, and structured document export in a fast-paced startup environment.

Summer Research Intern – Hallucination Detection in LLMs

Jan 2026 – May 2026

SRIP 2026, VIT Chennai (under Dr. Sandhya P)

github.com/Sharann-del/Bio-Inspired-AI-Hallucination-Suppression

- Built a hallucination detection pipeline combining confidence scoring, NER-based entity extraction, and Wikidata/Wikipedia evidence retrieval for factual grounding.
- Integrated RoBERTa NLI for contradiction detection between generated claims and evidence; added a blockchain audit layer for tamper-proof logging; published a research paper and deployed a live demo API.

Billing System Developer Intern

Mar 2025 – Jul 2025

GeoPacific Solutions, Chennai

github.com/Sharann-del/Centralized-Billing-And-Inventory-Management-System

- Built a centralized billing and inventory platform using Node.js, TypeScript, and PostgreSQL supporting multi-product invoices and multi-role franchise workflows.
- Designed JSONB-based schema for flexible product storage and dynamic invoice generation; implemented role-based JWT auth across admin, franchise, and cashier roles.
- Optimized backend workflows for real-time billing, transaction tracking, and franchise-level inventory management.

PROJECTS

API Keychain

[GitHub](#) | [apikeychain.dev](#)

Self-hosted LLM gateway behind a single OpenAI-compatible endpoint with effort-tier cascading, automatic failover, and AES-256-GCM key encryption. FastAPI and SQLite power the backend; a Next.js dashboard with Supabase auth handles key management and monitoring.

Cosmos

[GitHub](#) | [cosmos-tui.app](#)

pip-installable terminal AI chatbot (`cosmos-ai`) with OpenRouter multi-model routing and a keyboard-driven Textual TUI. Conversation history syncs across devices via Supabase; published on PyPI.

Kern

[GitHub](#) | [kern-alpha.vercel.app](#)

Keyboard-driven personal data OS with schema-free JSONB modeling, relational collection linking, and a “views as code” system using Monaco editor and sandboxed React execution. Integrates GitHub, Notion, Google Calendar, and RSS as live collections; MCP server via Supabase Edge Functions.

FinSight AI

[GitHub](#)

Persona-aware personal finance platform for India with category budgets, live NSE/BSE quotes, AMFI mutual fund tracking, and savings goals. Includes Kash, a context-aware AI copilot for natural-language transaction logging, built on React 18, Supabase, and OpenRouter.

Lobe

[GitHub](#)

Second-brain web app on a Sections/Articles architecture as a structured alternative to Notion. Supports rich text editing and cross-section linking; full-stack Next.js and Supabase with a minimal editorial UI.

Study Organiser

[GitHub](#)

Academic workspace that auto-classifies uploaded lecture documents (PDF/PPTX) by subject and module using keyword-based NLP and scikit-learn. FastAPI backend with pdfplumber and python-pptx; vanilla HTML/CSS/JS frontend with course and syllabus management.

Landroid

[GitHub](#)

Flutter and FastAPI app for land health monitoring from drone imagery, processing GeoTIFF orthomosaics to generate NDVI-based plant health maps. Supports consultant and landowner roles; Supabase with PostGIS handles spatial data and parcel management.

Student Dashboard

[GitHub](#)

Full-stack academic system integrating VTOP and LMS data with attendance tracking, CGPA/GPA simulation, and semester-wise breakdowns. Includes planning modules for assignments, notes, tasks, and timetable; built with React, TypeScript, Node.js/Express, PostgreSQL/Prisma, and JWT.

Arbor

[GitHub](#)

Tree-based problem-solving tool with React Flow visualization supporting sub-problem decomposition and context-aware AI reasoning via OpenAI API with BYOK. Problem trees export and import as JSON for persistence.

Notion Widgets (iOS)

[GitHub](#)

SwiftUI app rendering Notion database content as WidgetKit home screen widgets with real-time refresh and filtering by status, priority, and date. Optimized for glanceable display of tasks, schedules, and academic events.

Terminaltype

[GitHub](#)

Terminal typing test with real-time WPM and accuracy tracking; a distraction-free CLI-native TUI with no browser dependency, listed on Terminal Trove. Supports configurable word sets entirely within a keyboard-driven environment.

Course and Module Recognition

[GitHub](#)

Document intelligence tool identifying course names and module/unit numbers from academic PDFs and PPTX files using pattern matching and NLP classification. Lightweight standalone utility for auto-organizing study materials without manual input.
